Annual Crop Report

2017 Vintage

An analysis of varietal tonnage and prices of grapes grown on the British Columbia mainland and used in the production of wine in the 2017 vintage.

Notes Regarding Data Collection

“This data is unaudited and is produced for industry information only”

It has been 2 years since our last crop report for the 2015 BC vintage. The B.C. Wine Grape Council (BCWGC) has invested money in a computer program that will enable us to give industry a crop report each year by June 1st. Because BC mainland wineries are required by regulation to report and pay levies on tonnage purchased to the BCWGC, it was a natural for the BCWGC to take on this essential industry task.

The data collected for this report is held in strict confidence and individual grower/winery information will not be divulged to anyone. Also note the BCWGC is required to have an annual audit and this is carried out by the Grant Thornton LLP accounting firm (formerly White Kennedy LLP).

The 2017 vintage was late in arriving due to a long, cold winter and very wet spring with lots of flooding. After this poor start to the vintage we had a very dry summer with many fires and smoke in the valley. The smoke cover does not seem to have impacted the fruit and most winemakers feel it will be an excellent vintage. The harvest was 1-2 weeks early, with average tonnages reported.

Collection method

Crop information was collected through a proprietary online member portal where winery members entered tonnage report details including grower, vineyard location, varietals per vineyard location, and price per varietal. In instances where members submitted a paper or excel based report to the council, the BCWGC entered the crop information on behalf of the winery member. Reports were collected until April 30, 2018; reports received after that date were not included.

Pricing

Winery members who did not record an internal purchase price for their own grapes were instructed to use a “no value” indicator of \$1.00. These records were removed from the Average Price calculation. There were 601 entries of this type which equated to 18% of the total tonnage volume.

Prices were filtered to exclude values outside of the standard deviation range of \$1,000 - \$5,000. There were 43 entries over \$5000 which equated to 0.79% of the total tonnage volume. There were 11 entries under \$1,000 which equated to 0.20% of the total tonnage volume.

In order to remain consistent with past reports we have reported an average price/ton instead of a median price. The difference between these is about 2%, with some prices higher and some lower. These average prices were weighted by their respective tonnages.

Lynn Bremmer, Chair
BC Wine Grape Council

Kate Durisek, Executive Director
BC Wine Grape Council

Respondent Comparisons

Overview of winery respondents

Total Grape Wineries in BC	Total Mainland Grape Wineries	Total Respondent Wineries	Percentage of Total
